## FOR IMMEDIATE RELEASE

February 24, 2016

**Naperville, IL** – The Turbine Inlet Cooling Association (TICA) is pleased to announce the following:

- TICA Officers and Directors Elected for 2016
- Availability of Complimentary TICA Membership for Gas Turbine Owners/Operators

Chairman,  
Rodney Kohler  
(Caldwell Energy)

Vice Chairman,  
Steven Good  
(Danfoss Corp.)

President,  
Chris Mincey  
(Crom Corp.)

Vice President,  
Andrew Sickler  
(Baltimore Aircoil)

Secretary,  
Guy Frankenfield  
(DN Tanks)

Treasurer,  
Patricia Graef  
(Munters Corp.)

Director,  
Patrick Zeller  
(Munters Corp.)

TICA encourages gas turbine owners/operators to benefit from its limited time offer (available through June 30, 2016) of complimentary TICA membership for at least one year. The offer will save the normal annual membership fee of \$500 to \$1,000, depending on the business category of the gas turbine owner/operator. TICA's current membership of 57 organizations includes 29 owners/operators of gas turbines. The benefits of TICA membership for gas turbine users, and a list of current gas turbine user members, are available on the [TICA website](#). The benefits for gas turbine users include the following:

- [Online Users' Forum](#)
- [Full version of the Turbine Inlet Cooling \(TIC\) Performance Calculator](#)
- [Full version of the TIC Installation Database](#)
- [Access to experts for all TIC technologies](#)
- Opportunities to impact TICA activities to reflect the needs of gas turbine users.

The TICA membership form is also available [online](#).

TICA invites gas turbine users and operators, and others interested in gas turbine cooling, to join the TICA group on [LinkedIn](#), and start discussions to get answers to your questions about turbine inlet cooling.

If you have any questions, please call 630-357-3960 or send us an [e-mail](#).

The Turbine Inlet Cooling Association (TICA) is a non-profit trade association that promotes the worldwide development and exchange of knowledge related to TIC for enhancing power generation. TIC provides a cost-effective, energy-efficient, and environmentally beneficial means to enhance power generation capacity and efficiency during hot weather, when un-cooled gas turbines suffer a dramatic loss in power output.
