TURBINE INLET COOLING ASSOCIATION (TICA)

Partial Database of Turbine Inlet Cooling (TIC) Installations

Updated: March 20, 2024

Please send corrections or additions to:
J.S. Andrepont
The Cool Solutions Company
CoolSolutionsCo@aol.com

Notes: All data are approximate and represent examples of TIC installations; however, values reported for each TIC technology are not necessarily representative of the actual number of installations nor are they indicative of the total number for each cooling technology.
Efforts have been made to verify the accuracy of the data; however, TICA makes no warranty regarding accuracy or completeness.
Data were obtained primarily from TICA members and from other published sources.
For questions or further information on applications, please contact the involved TICA members.

	Turbine Installation Data								Hot Weather Power Enhancement from TIC [1]		TIC System Developer, Designer, Equipment Supplier(s), or Installer	
Initial Year of TIC Operation	CT Plant Owner / Operator	CT Plant Location	Simple or Combined Cycle (SC or CC)	TIC Applied to Existing or New CTs	Quantity of CTs	CT Make	CT Model	CT Plant I.S.O. Output (MW)	TIC Power Increase (MW)	TIC Power Increase (%)	**TICA Member with Primary Involvement**	**Other TICA Member(s) Contributing Products or Services to the Project**

TURBINE INLET COOLING ASSOCIATION (TICA)

Partial Database of Turbine Inlet Cooling (TIC) Installations

Updated: March 20, 2024

Please send corrections or additions to:
J.S. Andrepont
The Cool Solutions Company
CoolSolutionsCo@aol.com

Notes: All data are approximate and represent examples of TIC installations; however, values reported for each TIC technology are not necessarily representative of the actual number of installations nor are they indicative of the total number for each cooling technology.
Efforts have been made to verify the accuracy of the data; however, TICA makes no warranty regarding accuracy or completeness.
Data were obtained primarily from TICA members and from other published sources.
For questions or further information on applications, please contact the involved TICA members.

Footnotes:

[1] Values for Hot Weather Power Enhancement from TIC are relative to design ambient air temperature, not to I.S.O. conditions.
[2]
[3] TIC project was originally executed while the firm's principal was at a different firm.
[4] In some cases, only a portion of the installed refrigeration or storage capacity is used for TIC.
[5] TIC equipment was fabricated and delivered; but power plant project was cancelled.

Please send

Notes: All data are approximate and represent examples of TIC installations; however, values reported for each TIC technology are not necessarily representative of actual number of installations nor it is indicative of total of total number for each cooling technology
Efforts have been made to verify the accuracy of the data; however, TICA makes no warranty regarding accuracy or completeness.
Data were obtained primarily from TICA members and from other published sources.
For questions or further information on applications, please contact the involved TICA members

	Hot Weather CT Plant Power Enhancement from TIC					Evap. Cooling System	Refrigeration System										Inlet Air Heating System	
							Refrigeration Equipment [4]						Thermal Energy Storage (TES) System [4]					
Initial Year of TIC Operation	Non-TIC Power Output (MW)	Ambient Dry Bulb Air Temp (deg F)	Ambient Wet Bulb Air Temp (deg F)	Design TIC Inlet Air Temp (deg F)	TIC Power Output (MW)	Evap Media, Fog, or Wet Comp	Total TIC Cooling Coil Load (tons)	Inlet Coil Working Fluid	Absorp (A) and/or Mech (M) Chillers	Type of Heat Rejection	Chiller Working Fluid	Refrig'n System Capacity (tons)	TES Design Discharge (hrs/day)	Daily or Weekly TES Cycle	Chilled Water (CHW), Ice or	Thermal Storage Capacity (ton-hrs)	Gas, Oil, Steam, Electric, or Cond'r Wtr	Primary Source of Information
